

0.6 m | 2 ft ValuLine® High Performance Low Profile Antenna, dual band, dual polarised 71.000 – 86.000 GHz and dual polarised 21.200 - 23.600 GHz, OEM custom flange

### Product Classification

| Product Type                                     | Microwave antenna  |
|--|--|
| Product Brand                                    | ValuLine®  |
| General Specifications                           |  |
| Antenna Type                                     | VHLP - ValuLine® High Performance Low Profile Antenna, dual band |
| Polarization                                     | Dual 80 GHz, Dual 23 GHz   |
| Antenna Input                                    | OEM specific   |
| Antenna Color                                    | White  |
| Reflector Construction                           | One-piece reflector  |
| Radome Color                                     | Gray   |
| Radome Material                                  | Composite Broadband  |
| Flash Included                                   | No   |
| Side Struts, Included                            | 0  |
| Side Struts, Optional                            | 0  |
| Dimensions                                       |  |
| Diameter, nominal                                | 0.6 m   2 ft   |
| Electrical Specifications                        |  |
| Operating Frequency Band                         | 71.000 – 86.000 GHz  |
| Gain, Low Band                                   | 48.5 dBi   |
| Gain, Mid Band                                   | 49.5 dBi   |
| Gain, Top Band                                   | 50 dBi   |
| Boresite Cross Polarization Discrimination (XPD) | 27 dB  |
| Front-to-Back Ratio                              | 68 dB  |
| Beamwidth, Horizontal                            | 0.5 °  |
| Beamwidth, Vertical                              | 0.5 °  |

|  | maximum cross-polarized signal over an angle twice the 3 dB beamwidth of the co-polarized main beam.   |
|--|--|
| Front-to-Back Ratio                        | Denotes highest radiation relative to the main beam, at 180° ±40°, across the band. Production antennas do not exceed rated values by more than 2 dB unless stated otherwise.  |
| Return Loss                                | The figure that indicates the proportion of radio waves incident upon the antenna that are rejected as a ratio of those that are accepted.   |
| VSWR                                       | Maximum; is the guaranteed Peak Voltage-Standing-Wave-Ratio within the operating band.   |
| Radiation Pattern Envelope Reference (RPE) | Radiation patterns define an antenna's ability to discriminate against<br>unwanted signals. Under still dry conditions, production antennas will not<br>have any peak exceeding the current RPE by more than 3dB, maintaining<br>an angular accuracy of +/-1° throughout |
| Radiation Pattern Envelope Reference (RPE) | Radiation patterns define an antenna's ability to discriminate against<br>unwanted signals. Under still dry conditions, production antennas will not<br>have any peak exceeding the current RPE by more than 3dB, maintaining<br>an angular accuracy of +/-1° throughout |
| Wind Speed, survival                       | The maximum wind speed the antenna, including mounts and radomes,<br>where applicable, will withstand without permanent deformation.<br>Realignment may be required. This wind speed is applicable to antenna<br>with the specified amount of radial ice.                |
| Axial Force (FA)                           | Maximum forces exerted on a supporting structure as a result of wind<br>from the most critical direction for this parameter. The individual<br>maximums specified may not occur simultaneously. All forces are<br>referenced to the mounting pipe.                       |
| Side Force (FS)                            | Maximum side force exerted on the mounting pipe as a result of wind from<br>the most critical direction for this parameter. The individual maximums<br>specified may not occur simultaneously. All forces are referenced to the<br>mounting pipe.                        |
| Twisting Moment (MT)                       | Maximum forces exerted on a supporting structure as a result of wind<br>from the most critical direction for this parameter. The individual<br>maximums specified may not occur simultaneously. All forces are<br>referenced to the mounting pipe.                       |
| Packaging Type                             | Andrew standard packing is suitable for export. Antennas are shipped as<br>standard in totally recyclable cardboard or wire-bound crates (dependent<br>on product). For your convenience, Andrew offers heavy duty export<br>packing options.                            |
